Software engineer with hands-on experience building and deploying production backend services using Python and cloud infrastructure on AWS and GCP. Comfortable owning projects end-to-end, from API design through CI/CD and deployment.

EXPERIENCE

Software Engineer — Salo Labs LLC

January 2026 - Present

Austin, TX

- Designed and deployed a multi-service Python backend to GCP Cloud Run, integrating Cloud SQL and GCS storage across dev, staging, and production environments.
- Built a two-workflow GitHub Actions CI/CD pipeline with automated testing on every push and deployment gated on a passing merge to main.
- Maintained 100+ passing pytest tests across the codebase, with CI enforcing a minimum coverage threshold to catch regressions early.

PROJECTS

Weather Alerts API Backend — Personal Project

github.com/ReneMSdev/weather-alerts-backend

- Built a production-ready REST API with PostgreSQL and Redis caching, achieving ~40% faster response times.
- Deployed to Render via GitHub Actions with a TypeScript compile gate on every push.

EDUCATION

Bachelor of Science in Computer Science — Western Governors University — 2024

CERTIFICATIONS

AWS Certified Cloud Practitioner — Amazon Web Services — 2025

Linux Essentials — Linux Professional Institute — 2024

SKILLS

Backend: FastAPI (Python), Node.js, TypeScript, REST APIs

Cloud & DevOps: AWS, GCP, Docker, GitHub Actions CI/CD

Databases: PostgreSQL, Redis, SQLAlchemy
