EXPERIENCE

Software & Dev Ops Engineer

Salo Labs LLC

January 2026 - Present, Austin, TX

- Architected and built LinkLeaf™, a QR code-based digital identity platform with a FastAPI backend, Flutter mobile frontend, and fully containerized GCP infrastructure.
- Designed and deployed a multi-service FastAPI backend to GCP Cloud Run, integrating Cloud SQL (PostgreSQL), dual GCS buckets with signed URL access controls, and Firebase Authentication across isolated development, staging, and production environments.
- Built a gated two-workflow GitHub Actions CI/CD pipeline — automated testing on push/PR with a live PostgreSQL service container, deployment to Cloud Run triggered only on passing merge to main.
- Containerized the application using a multi-stage Dockerfile with an entrypoint script handling database migrations before server startup.
- Maintained 100+ passing pytest tests across 7 modules (users, profiles, themes, links, contacts, media, subscriptions) in a modular monolith architecture with GCS and Firebase fully mocked for testing; CI enforces minimum coverage threshold on every push.

Fiber Optic Technician

SandCastle (contracting for Google Fiber)

March 2026 - Present, Austin, TX

- Contributed to Google Fiber's infrastructure deployment and quality assurance for network operations.

Freelance Full-Stack Engineer

Self Employed

October 2024 - January 2026, Remote

- Integrated an AWS RDS PostgreSQL database for a startup's (Ecobridge) Shopify plugin, modeling merchant accounts, configuration settings, and cache data, improving sync reliability and reducing Shopify API calls by ~30%.
- Implemented a reliable Shopify OAuth flow in Node.js (Express) and TypeScript to securely handle app installation, token exchange, and merchant authentication that reduced auth-related errors by ~10%.
- Leveraged modern AI coding tools (Cursor, GPT) to accelerate prototyping and documentation, reducing development time by ~25%.

PROJECTS

Weather Alerts API Backend (Node.js, Express, TypeScript)

Personal Project • github.com/ReneMSdev/weather-alerts-backend

- Built a production-ready REST API with PostgreSQL, Redis caching, and node cron background jobs for automated weather data sync, achieving ~40% faster response times.
- Deployed to Render via GitHub actions — TypeScript compile gate on push/PR, automated deploy hook triggered on merge to main.
- Provided REST API endpoints consumed by a cross-platform iOS/Android app built with React Native (Expo).

EDUCATION

Bachelor of Science in Computer Science

Western Governors University • Salt Lake City, UT • 2024

CERTIFICATIONS

AWS Certified Cloud Practitioner

Amazon Web Services • 2025

Linux Essentials

Linux Professional Institute • 2024

ITIL 4 – Foundation Certificate in IT Service Management

PeopleCert (AXELOS) • 2024

Professional Scrum Master I (PSM I)

Scrum.org • 2023

SKILLS

DevOps / Cloud: GCP (Cloud Run, Cloud SQL, GCS), AWS, Docker, GitHub Actions CI/CD, Firebase, Linux

Backend: FastAPI (Python), Node.js, Express, TypeScript, JavaScript, REST APIs

Databases: PostgreSQL, Redis, Drizzle ORM, SQLAlchemy, Schema Design

Testing: Pytest, unittest.mock, API Testing
