Website: renemsdev.com

Software engineer with a B.S. in Computer Science and hands-on experience building, deploying, and maintaining production backend services using Python (FastAPI), Node.js, and cloud infrastructure on AWS and GCP. Comfortable owning projects end-to-end, from schema design and API development through CI/CD pipelines, containerization, and cloud deployment. Brings a track record of improving reliability and test coverage, an interest in mentoring, and a genuine preference for solving real customer problems over chasing specific frameworks. This is a test line...

EXPERIENCE

Software & DevOps Engineer — Salo Labs LLC

January 2026 - Present

Austin, TX

- Architected and built LinkLeaf from scratch: a QR code-based digital identity platform with a FastAPI backend, Flutter mobile frontend, and fully containerized GCP infrastructure shipping across three isolated environments.
- Designed and deployed a multi-service Python backend to GCP Cloud Run, integrating Cloud SQL (PostgreSQL), dual GCS buckets with signed URL access controls, and Firebase Authentication across isolated dev/staging/production environments.
- Built a gated two-workflow GitHub Actions CI/CD pipeline: automated testing on push/PR with a live PostgreSQL service container, deployment triggered only on passing merge to main, which keeps the continuous deployment infrastructure reliable and fast.
- Containerized the application using a multi-stage Dockerfile with an entrypoint script handling database migrations before server startup.
- Maintained 100+ passing pytest tests across 7 modules in a modular monolith, with GCS and Firebase fully mocked; CI enforces a minimum coverage threshold on every push to catch regressions early.
- Used structured logging alongside CI/CD pipelines to monitor system behavior and maintain release quality across environments.

Freelance Full-Stack Engineer — Self Employed

October 2024 - January 2026

Remote

- Integrated an AWS RDS PostgreSQL database for a startup's (Ecobridge) Shopify plugin, modeling merchant accounts, configuration settings, and cache data, improving sync reliability and reducing Shopify API calls by ~30%.
- Implemented a Shopify OAuth flow in Node.js (Express) and TypeScript to securely handle app installation, token exchange, and merchant authentication, reducing auth-related errors by ~10%.
- Built a startup's landing page using Next.js, TypeScript, and Tailwind CSS, and improved page load time by ~30% through WebP image compression and lazy loading for off-screen assets.
- Used AI coding tools (Cursor, GPT) to accelerate prototyping and documentation, reducing development time by ~25%.

PROJECTS

Weather Alerts API Backend (Node.js, Express, TypeScript) — Personal Project

github.com/ReneMSdev/weather-alerts-backend

- Built a production-ready REST API with PostgreSQL, Redis caching, and node-cron background jobs for automated data sync, achieving ~40% faster response times.
- Deployed to Render via GitHub Actions: TypeScript compile gate on push/PR, automated deploy hook triggered on merge to main.
- Provided REST API endpoints consumed by a cross-platform iOS/Android app built with React Native (Expo).

React Native Weather App (Expo, TypeScript) — Personal Project

github.com/ReneMSdev/WeatherAlertsRN

- Improved data loading speed by ~55% by running API requests in parallel without blocking the UI.
- Implemented state management with React hooks and AsyncStorage for device and location persistence.

EDUCATION

Bachelor of Science in Computer Science — Western Governors University — 2024

CERTIFICATIONS

AWS Certified Cloud Practitioner — Amazon Web Services — 2025

AWS Certified Solutions Architect — Amazon Web Services — In Progress

Linux Essentials — Linux Professional Institute — 2024

Professional Scrum Master I (PSM I) — Scrum.org — 2023

SKILLS

Backend: FastAPI (Python), Node.js, Express, TypeScript, JavaScript, REST APIs

Databases: PostgreSQL, MySQL, Redis, SQLAlchemy, Drizzle ORM, Schema Design

Cloud & DevOps: AWS, GCP (Cloud Run, Cloud SQL, GCS), Docker, Terraform, GitHub Actions CI/CD, Linux, Firebase

Testing: Pytest, unittest.mock, API Testing

Frontend: React, Next.js, React Native (Expo), Tailwind CSS

Tools: Git, GitHub, Figma
